For Fundamentals of Database Systems by DorfThe present invention relates to a cup holder for aircraft
passenger seats and, in particular, to a harness-mounted cup holder for a passenger seat. The owner of an
aircraft passenger seat may wish to store a cup in a cup holder disposed on the passenger seat while, at
the same time, avoid damaging the cup. This is especially true if the cup holder is an AC cup holder that
uses an AC plug as a power source. If the cup is dropped or otherwise contacted by a passenger, the cup
may be damaged by the hard or cold surface of the cup holder.L-Arginine and L-citrulline content in sweat
as biomarkers of oxidative stress in physically active young men. Arginine has been shown to be
metabolized to L-citrulline during exercise in muscle tissue. This can be measured by L-citrulline content in
sweat. Changes in circulating L-arginine/L-citrulline ratio in response to physical exercise have been linked
to oxidative stress. The aim of this study was to assess whether oxidative stress is associated with changes
in L-arginine and L-citrulline content in sweat in physically active young men. Sixteen young (24 ± 4 years)
men, physically active according to the ACSM guidelines for physical activity, completed a prolonged bout
of resistance exercise. Subjects repeated the exercise three times and, at intervals of 3, 6 and 24 hours, a
24-hr urine sample was collected. L-arginine and L-citrulline content in the sweat samples was measured
using HPLC. Subjects exhibited significant increase in L-citrulline content in the sweat after the exercise
bout (~44% at 24 hr), whereas L-arginine

This study evaluated the efficacy and feasibility of computer-guided navigation in intrarenal access and antegrade stenting for ureteral stenting during ureteric reconstruction in patients with iatrogenic ureteral injury. Forty-two patients (mean age, 31.1 ± 7.5 years) with iatrogenic ureteral injury underwent successful antegrade stenting for ureteral diversion. Twenty-four patients underwent computer-guided stent placement. Patient follow-up ranged from 4 to 17 months (mean, 7 months). Patient demographics, operative details, stent-related complications, and the cost of stent retrieval at the time of stent insertion and removal were compared between computer-guided and noncomputer-guided groups. A total of 48 stents were placed in the computer-guided group, whereas 78 stents were placed in the noncomputer-guided group. The overall success rate of stent placement was 100% in the computer-guided group compared with 95.2% in the noncomputer-guided group ($p=.49$), and only 2 stents (4.2
