Read this article for any additional details about how to fix mediaTek Inc. MT65xx Preloader USB\VID\_0e8d&PID\_2000. â€¢ Download and. How to install MT65xx Preloader USB Drivers - MediaTek Preloader USB Drivers.Q: Why are chemical sensors used in the gas chromatograph? Why are gas chromatographs equipped with chemical sensors rather than using an electronic sensor system? A: That is a very precise question, and it has a specific answer: chemical sensors are more sensitive than electronic sensors, and hence they can detect more components. This is important, for example, for organic compounds of high volatility, that are often not detected by gas chromatography-mass spectrometry. To substantiate this, here is a quote from the manufacturer's website of the Chromoscan II: The Chromoscan II GC/MS is equipped with a chemical analyzer that detects and accurately measures compounds present in a sample. This system has enhanced sensitivity, performance and range in comparison to an analog electronic meter. A: Chemical sensors (specially gas sensors such as flame ionization and thermal conductivity detector sensors) are more sensitive than electronic sensors and so are more useful for detecting smaller amounts.
