Applying Filters with Photoshop Filters enable you to change an image's color, tone, contrast, brightness, and so on. As a professional photographer, you may be in a position to have access to expensive filters that you can use to give your shots a polished look. You may be able to combine all the filters together, or use some of them in tandem, to create a composite image (the process of combining multiple pictures to make one picture). For most of us, though, this is a luxury we don't have, and we've got to work with our existing images and add to them. The next few sections show you how to create and apply Photoshop filters. Applying and deleting filters To apply a filter, open a file in Photoshop and then follow these steps: 1. Choose Filter>Filter>Add Filter. The Filter Options dialog box appears, as shown in Figure 4-1. You have the following options: * Filter: Choose a filter from the list. The center portion of the dialog box lists the currently applied filters on your screen. Figure 4-1: You can also access filters by choosing Filter>Filter, or by pressing Ctrl+U. * Layer: Select a filter that will apply to every image you work on. (The color of this circle tells you whether the filter affects the current layer.) * Load: Click this button to load a previously created filter file. Choose a filter file from the dialog box that appears. (This button also opens a dialog box so you can select a file to load.) * Clear: Clear the filter you just loaded or the filter you want to apply. To clear
