The interface: public interface IHistory { IList GetAllStoredValues(); } It can be: an enum, a class with a List property or a struct with a List property. There are 4 implementations: a (simple) dictionary, with a List property a linked list, with a List property a stack, with a List property a list, with a List property Is there a simple, standard way in.NET 4.5 to find out if I can assign a value to the IList property of the interface? An extension method would be great, but I don't want to iterate over the possible types, as this can be quite cumbersome. Note: I don't want to have to worry about nulls or empty lists. I just want to know if the given type has the List property. A: In this case, you could use reflection to work out the PropertyInfo information for each of the interfaces. Then you could use reflection to see if it has the List property. For example: Type enumType = typeof(HistoryEnum); Type enumPropType = enumType.GetProperty("Names", BindingFlags.Instance | BindingFlags.Public); if (enumPropType!= null && enumPropType.PropertyType.IsGenericType && enumPropType.PropertyType.GetGenericTypeDefinition() == typeof(List)) { // it's got a List property, so you can assign to it }

Treevenge is a single player role-playing game that puts the player in control of a hero, a brave young farmer, who must clear the forest from evil elements. During the game, the young hero will learn to master his own magical powers and eventually learn the ways of the mysterious Uberskirt. The gameplay is centered around exploration and battling various evil entities that create an ominous atmosphere. In addition, many of the enemies have their own unique abilities and are cleverly designed to keep the player on their toes. As the player fights enemies, they will soon realize that there is more to the story and the Forest than meets the eye. During the game, the players are progressing on the Hero quest chain with nearly 25 non-violent quests to choose from. As the player is traveling along the Hero quest chain, the game will track the players skills and experience gained to help customize the play-through. The choices and actions taken during the Hero quest chain will shape the overall story, and though the last quest might be considered the main quest for each game, the story will continue throughout the entire journey. Players who enjoy a good story should not hesitate to read the game manual, it contains all the information you need to adventure! A Cool and Stylish Game. Its Storyline is Average. The Good: - An Interesting Game for Fans of Super Mario and Castlevania. The Bad: - A lack of Continuity 9/10. GameplayNote: This is the first of a two part article, which will deal with performance testing of ZFS filesystems using MySQL. For more information, please see Part 2. The benchmarks in the MySQL documentation benchmark tool are designed to represent the performance of a typical SQL workload, and are a good starting point for measuring the performance of an application using MySQL and ZFS. However, the typical SQL workload is not a very representative workload for a storage system. In particular, many of the application workloads that are measured in the standard benchmarks are heavily concentrated on storage operations. For example, most of the IO in the MySQL 5.0 benchmarks runs through a single SQL statement. The MySQL tool can also create IO load that is not easily represented in the application benchmarks. For example, we can create millions of insertions and updates on a tables that has less than 1% non-unique columns. As you can imagine, a single MySQL statement can affect all the tables in the database, even if the statement is never executed on the target tables. We can also do a distributed read in which there are thousands of remote reads and updates. The third part of this series will illustrate how to use the MySQL performance benchmark to create realistic workloads that more closely match the behavior of storage systems.A vehicle control unit (VCU) of an automatic transmission includes a housing, a master cylinder, a pump, a solenoid valve, and a number of electronic components. In a control system, oil flows from the master cylinder through the solenoid valve to the VCU for the purposes of actuating a clutch and to lubricate the VCU. The flow is monitored by pressure and flow rate monitoring devices located at the VCU. Based on the pressure, flow rate, and time data, the VCU may be able to determine if the flow is within predetermined specifications and whether the master cylinder is leaking oil or the VCU is leaking oil or there is a problem with the master cylinder. The pressure monitoring device measures and records pressure data which provides an input to a processor of the VCU. The VCU is required to "zero"

 Planet Frozen Planet is a 2011 British nature documentary series produced by BBC Natural History, narrated by Ioan Gruffudd. It was produced and directed by Fiennes and Terry Hughes and is a co-production between the BBC Natural History Unit and Framestore. It was filmed using the new BBC / Animal Logic AI camera system which allowed for more in-depth exploration of 3D environments. Each episode focuses on a different location in the world, with different environments and with a continuing theme. The series shows which species live where, and explains why they are able to adapt and thrive when other species cannot. Filmed in 2009, the programme was originally aired on BBC One on 9 February 2011. One week later, it received series 3 of the award for the best nature documentary from the Royal Television Society. It won an Emmy for Outstanding Informational Programming. Production The filming of Frozen Planet began in May 2009, and the project was originally titled Frozen Assets, before being renamed at the suggestion of Martin Durkin, who is a producer on the BBC Natural History Unit and Animal Planet. Frozen Planet is the only BBC series that has been shot using the Animal Logic MotionScan camera. The filming was completed in mid-2009 and the series was broadcast on 9 February 2011. Episodes Frozen Planet premiered on BBC One on 9 February 2011. The series is presented by Fiennes and Hughes, two longtime friends and partners in prior work. They have also stated their intention to develop the series into an ongoing series in the future. Series overview Episode 1: Islands: Mystery Cays This episode premiered on 9 February 2011. The episode opens on the Caribbean Sea, where the team arrives on a expedition vessel and discovers a semi-tropical paradise, rich in biodiversity and home to the King Whalefish (Rhaphidichthys nobilis), a species that leads a very specific lifestyle on the ocean's edge. The crew arrives at a remote chain of islands and then travels to one of the new mystery cays. The cay hosts lobsters, sea turtles, reef sharks, leatherback sea turtles and thousands of fish, birds and crustaceans. The crew finds some of the sea turtles to be swimming around apart. This is the first time that such segregation has been discovered in animals. The angelfish is also the first record in the world of a species being able to choose between sexes when mating.

An upcoming action shooter from the creators of the hit title, Eve: Valkyrie, YSMC (yet sketchy with marketing) is the story of an innovative young pair of space pilots, Erik and Abby, who are forced to work together with the remnants of humanity in the aftermath of a violent interstellar war. Players will get in the cockpit of their customizable ships and fly in cooperative PvE and multiplayer missions to take down the AI controlled ships that keep attacking and killing off the last remaining people.When was it released? That's slightly confusing, but you can probably give that away based on the dates/information we've seen about the title so far. Early access is expected to begin in March, with a full release planned for Summer 2017.What is it? An action shooter from the creators of Valkyrie that will not only feature cooperative multiplayer but also cooperative singleplayer. It's too early to be too specific about the story but the universe seems very open. The original VR announcement focused on 3rd person versus as opposed to the other ways we've seen this genre of game to come out in the past (teleportation, bullet-time, etc). Which is good because they have a ways to go before they can get some of the tech to work efficiently.Youtubestream? Yes. From February 2016.What's your name? Eureka is the name of the studio behind the game.Thats' good to know.Q: How do you tell which deadbolt you have? I have a deadbolt lock with a small keyhole inside the hole and then a bolt that slides out from the inside. However, the key that came with it was different from the deadbolt that is on the back door in my office, so I want to know if the door I have is from the same series, before I replace the deadbolt. A: To tell between lock types, look at the cut at the top of the keyway - a typical European type (also typical in Ireland I believe) has just a small cut, while an American type (found in Wisconsin and other regions) has a large, triangular cut on top of the keyway. A: The manufacturer should be embossed in the key hole. The majority of the locks have one of 3 manufactures, BHG, Mul-T-Lock, and Schlage. If its from any of these manufacturers, you should be able to figure out who made it.
