consequences in young children. Dental caries is a multi-factorial disease affecting humankind since early civilization. Dental caries is a disease characterized by the presence of microbial and demineralized enamel lesions, and is primarily due to bacterial fermentation of sugars present in the oral environment. The main factors affecting the occurrence and severity of the disease are exposure to the cariogenic environment, susceptibility to enamel demineralization, and incidence and development of dental plaque. This review includes a brief summary of the oral cavity structure and the basic concepts and methods regarding dental caries etiology. The review also discusses how dental sealants would be effective in preventing dental caries in young children.The Rosetta spacecraft's final television

transmission took place at about 1:45am EDT (03:45 GMT) today after landing successfully on the comet 67P/Churyumov–Gerasimenko just under five months ago. Engineers at the European Space Agency's operations center at Darmstadt, Germany, at the moment when the robotic spacecraft began transmitting its last message, were the first to receive the message. It was sent only minutes before the landing of Rosetta's Philae lander. From an event that was originally scheduled for July 30, the Rosetta spacecraft sent its last data transmission. See the video below for the sequence of events: The mission's science team will receive thousands of bits of data from the lander Philae during the next few days and months, but this first transmission contains the only voice of the

spacecraft. "This is the last time I will speak," it says. "It is a present for you." c6a93da74d
