Lightroom's advanced, built-in editor has a Class Features panel at the bottom of the interface that works essentially like an Organizer and lets you select, organize, enhance, and work with the images in your project. The Compose panel (formerly called the Grid) is a more traditional composition toolset, with even more options for adjusting perspectives. It also lets you preview individual adjustments to see what they'll do to your image, rather than saving the changes just yet. Chromatic Aberration features a new kind of visual filter that looks like a long lens aperture with some ghosting blur. The video also touches on layers and Composition. Lightroom, the latest version of Adobe's popular client-based photo workflow workhorse for Windows, Mac, iPad and iOS devices, gives photographers more ways to organize and find photos. With Lightroom 5, you're now able to easily organize your projects into albums, organize similar photos into keywords, sort the photos into folders and subfolders, and create a deep dive into your collections. The lack of a native file browser in the Elements program might be a turnoff to some, but not to me. I find it very handy to select, drag and drop files directly from my Mac OS desktop into the program. Additionally, we can choose to edit the contrast of the image (including details), and the brightness. Photoshop's Brush panel allows us to paint out unwanted areas of the image and to preserve only the desired areas. The Blend modes allow any color in the image to change according to the selected mode. Default values for 2/3 of the modes are provided, along with a handy Blend to Step dialog for those who prefer to tweak their settings. Working with layers is also streamlined. You can copy, move, and combine multiple layers, and you can resize the layer. Create, edit, and composite images of any number of layers and dimensions into a final image as per your requirement.
