The Ribbon gives way to the Surface, which in turn gives way to a focus on features. Adobe's rethinking of the interface and presentational niceties is on full display. It's a dramatic shift away from what's become a familiar look and feel. This time, however, the changes are for the good. When I first tried Photoshop on Windows 10, I wasn't sure that I liked it. My initial reaction was that I would prefer Classic CS6 over Windows 10. The Ribbon was an aberration, and my unease with it came from its unfamiliarity. In time, however, I found that the tools were designed well, the UI made sense, and the interface was a joy to work with. I came to love the interface, but that doesn't mean it was a seamless transition, particularly when switching from one catalogue to another. The changes that Adobe has made to the interface are substantial, and it has the unusual effect of making the software feel more like a familiar app. Not all of the changes are improvements. The most vivid example is of the pop-up window. Like many pop-up windows, it is a useful and productive tool for you to use when doing editing, but it's also a bit of a nuisance. If the pop-up window doesn't work for you, you can turn it off. Some users want it to be more of a useful tool, and want to be able to direct the pop-up window to any spot on the screen. Adobe supports that, at least with the export command (File –> Export). The options that pop up are: graphics, photos and documents. There's also a unique option – **Fit Into Screen**. This tool lets you do crazy stuff like shrink the entire screen. I've seen this option work well, and horribly, but I have also seen it render the software unusable. Putting your pop-up window on its own screen at full-size is the most productive way to work.
