There are a few new Camera RAW-style features that aren't necessarily different in capability, but instead just more-numerous options. The most important of these is Auto Correction. This feature performs auto-exposure and auto-white balance, like Lightroom, but also pushes HDR images and target shutter speed info, and after downloading a few exposures, it offers to merge them automatically. You can also adjust the gamma settings and other post and exposure enhancements. If you don't want to or frequently can't edit the photo in Photoshop, you can control that aspect through Lightroom. After you adjust the exposures in Lightroom, you can build a slideshow or export the photos to an external device, and those adjustments will transfer to Lightroom. I agree about the support CC subscription, but the list of features is sooo long that I could easily build my own, from scratch. That said, it's probably the most powerful image editor around, and it's still the best way to get professional photos into the hands of designers/illustrators and videographers. I use Photoshop for my editor/illustrator and it is one of the most useful programs in my workstations. I do not know why Adobe left the graphic designing market, since I can't find another program that has all the functions that Photoshop does. I can draw, make my own fonts, use color, insert my own pictures, save for web, etc. After using Photoshop and other suites for many years I had to find alternatives for doing my work. I decided to try Picasa because it is free and I've heard a lot of good things about it. I'm disappointed, liking the functions that Photoshop offers, but I don't find Picasa has a half-way feature between Photoshop. I'm going to try and find a work-around, though I'm not sure whether I'll like it.

Today, AIGA has laid out plans to normalize design tools to increase industry standardization. Almost all software in that space are bloated. Most of the bloatedness is due to over-autosizing. Every change you make takes software from a perfectly useable set to a set that you don’t trust. So we are going to focus on how to reduce bloat. We are going to make design tools simple, accessible, and usable. We are going to push creative application developers to provide a simple canvas made from standardized, layered techniques. We are going to provide a foundation that makes parameters predictable, verbs that can be chained, and an easy way to live standards. Adobe’s Softwares: Photoshop, Lightroom, and then Indesign if you’re a designer. All the popular software out there. Adobe Photoshop and Adobe Lightroom are most of the programs I have heard of. +1 Lightroom. What’s important to me is that all the software must be upgraded so that there will be a continuous

flow from one software to another. Adobe is the only software I would mind to invest in. The Adobes are the best because it will be exploited more than any other software. Photoshop has long been known as perhaps the most powerful software in the world, with its devoted following stretching across almost every creative career from design, film, and video editing to photo manipulation. It's hard to clearly define which features can make the cut in 2013, as many are extensions to Photoshop's features.
